

**Welcome package v2.0**

# agrirouter main integration process for new partners

# Your personal contact for partner agreement

**Dr.-Ing. Jens Möller**  
General Management

Phone: +49 541 20197 001

Mail: [j.moeller@dke-data.com](mailto:j.moeller@dke-data.com)

-> further contacts: <https://my-agrirouter.com/en/company/contact/>

**Please Note:** The final partner agreement signing  
is not necessary to start the development.

# agrirouter marketplace

# agrirouter marketplace

- The agrirouter marketplace contains two central information websites for agricultural software and telemetry connections, which is offered by third-party providers for data exchange with the agrirouter and has been certified by a third-party company.
- The contents and functionalities of the respective solution as well as their description in the agrirouter marketplace are the responsibility of the respective provider.

The screenshot displays a grid of six software provider cards. Each card includes a logo, the provider name, a brief description, and a 'more' button. The providers are:

- Solorrow (EN)**: Solorrow GmbH. Description: Solorrow is the mobile app for variable field treatment, in which every farmer can create prescription maps with just a few clicks.
- xarvio™ FIELD MANAGER (EN)**: BASF Digital Farming GmbH. Description: xarvio™ FIELD MANAGER Simply Smarter Crop Production.
- farmmaps (EN)**: Alkerweb. Description: An advanced open web-based data service platform for research, education and valorisation to promote precision farming applications, smart farming and...
- Dacom Cloudfarm (EN)**: Dacom Farm Intelligence. Description: Send planned tasks and prescription maps to your machines and receive as applied data to do automatic crop recording.
- KUHN EasyTransfer (EN)**: KUHN. Description: Kuhn offers a simple tool for transferring or receiving documents remotely, Kuhn EasyTransfer.
- NEXT Farming (EN)**: FarmFacts GmbH. Description: The start of a new era in Digital Farming - with the farm management information system NEXT Farming.

# Create agrirouter marketplace content

## ➤ Create agrirouter marketplace content:

Step 2.1 Please go to: <https://my-agrirouter.com/en/interner-bereich/my-agrirouter/choose-maintance/>

Step 2.1 Click on the register button, then you will get a new window: <https://my-agrirouter.com/en/interner-bereich/my-agrirouter/registration/>

Step 2.1 Register your company as a partner. The support team will be notified automatically by mail.

Step 2.2 After approval from the support team, you can login and fill out your marketplace content in DE, EN, FR and RU languages.

Please find additional information under: [my-agrirouter.com Marketplace :: agrirouter Docs](#)

Step 2.3 Select “coming soon” label, if your solution is not yet approved by the certification team.

Step 2.4 The support team will be notified automatically to review and approve your solution.

Step 2.4 If everything is fine, your content entry will be visible in the agrirouter marketplace.

If you make content changes then the content has to be reviewed and approved again.

# agrirouter interface development

## Additional development support :

- If you need general support before starting with the agrirouter interface development (basic concepts, functionality, documentation, GitHub, etc.).
- If you need support during the agrirouter interface development and required assistance while agrirouter implementation.
- If you have spotted a developer related issue in the agrirouter solution.

## Developer support contact:

- Email address: [developer-support@my-agrirouter.com](mailto:developer-support@my-agrirouter.com)
- Telephone Number: **+49 (0) 541 20 197 004**

Sign up to receive our technical information:  
<https://agrirouter.statuspage.io/>

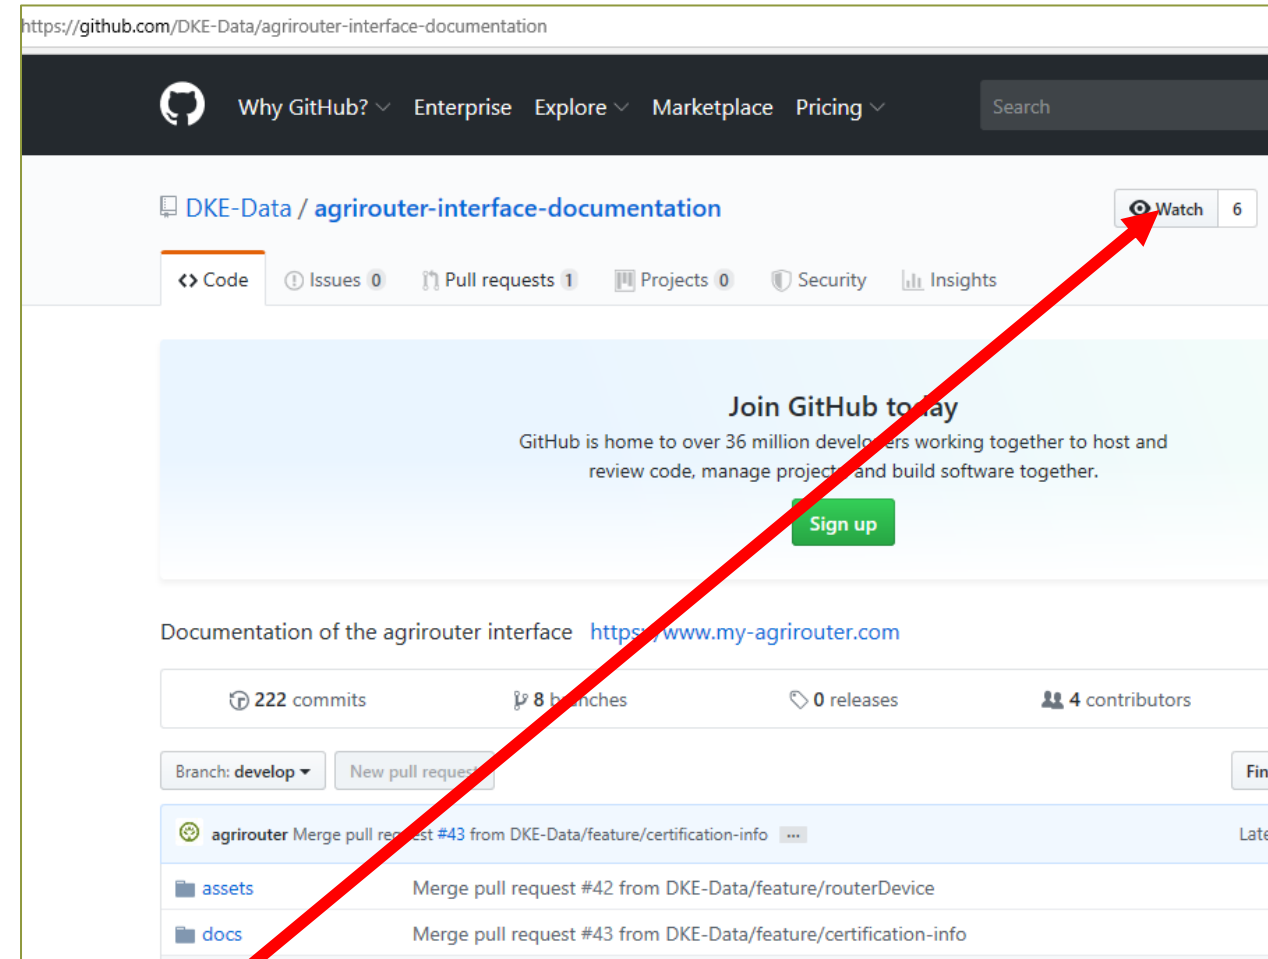

# agrirouter interface documentation for developers

The whole agrirouter interface developer documentation can be found here:

<https://docs.my-agrirouter.com>

- agrirouter protobuf definitions (for API messages):  
<https://github.com/DKE-Data/agrirouter-api-protobuf-definitions>
- agrirouter protobuf definitions (for message payload):  
<https://github.com/DKE-Data/agrirouter-tmt-protobuf-definitions>
- and some additional postman tools:  
<https://github.com/DKE-Data/agrirouter-postman-tools>

Please subscribe to the watchlist to be automatically informed about any changes.

# Open source SDKs for the agrirouter interface

Following open source agrirouter SDKs are available:

➤ Java SDK :

<https://github.com/DKE-Data/agrirouter-api-java>

➤ C++ SDK:

<https://github.com/DKE-Data/agrirouter-api-cpp>

➤ C++ QT SDK:

<https://github.com/DKE-Data/agrirouter-api-qt>

➤ .NET SDK:

<https://github.com/DKE-Data/agrirouter-sdk-dotnet-standard>

➤ PHP SDK:

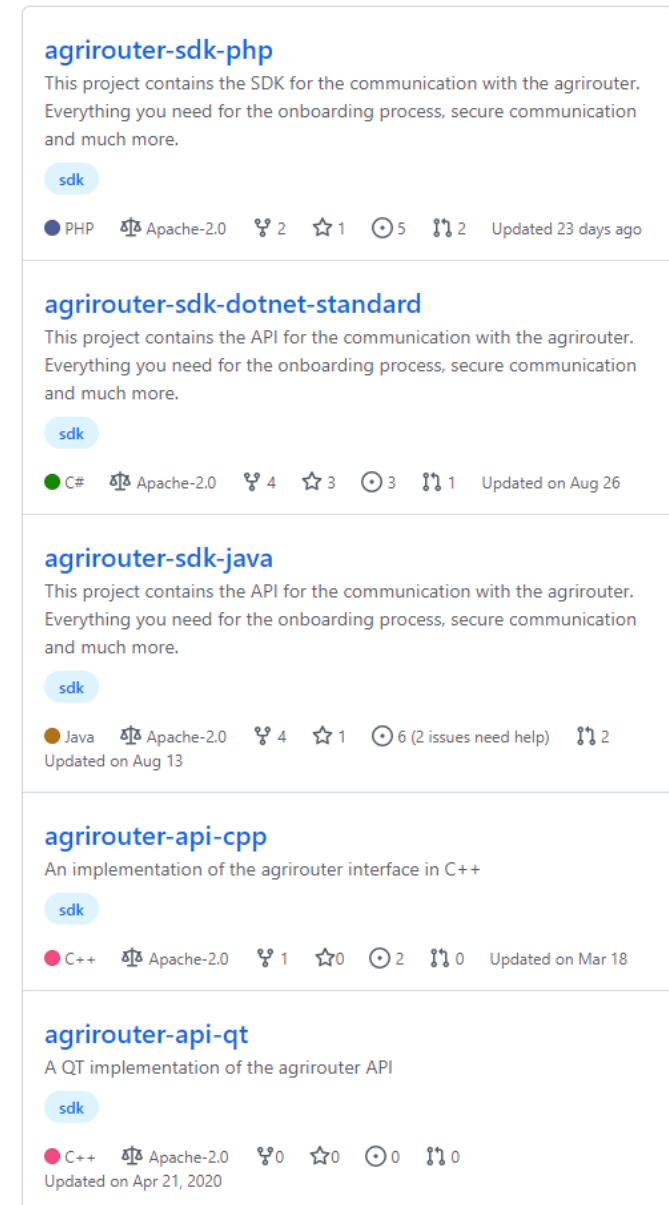

<https://github.com/DKE-Data/agrirouter-sdk-php>

**Issue and pull request creation is always welcome!**

agrirouter Slack-Workspace for direct collaboration with other developer:

[https://join.slack.com/t/agrirouter/shared\\_invite/zt-...](https://join.slack.com/t/agrirouter/shared_invite/zt-...)

The screenshot displays five GitHub repository cards for agrirouter SDKs. Each card includes the repository name, a brief description, a 'sdk' label, and various GitHub metrics (language, license, forks, stars, issues, pull requests, and update date).

- agrirouter-sdk-php**: PHP SDK for communication with the agrirouter. Updated 23 days ago.
- agrirouter-sdk-dotnet-standard**: .NET SDK for communication with the agrirouter. Updated on Aug 26.
- agrirouter-sdk-java**: Java SDK for communication with the agrirouter. Updated on Aug 13.
- agrirouter-api-cpp**: C++ implementation of the agrirouter interface. Updated on Mar 18.
- agrirouter-api-qt**: C++ QT implementation of the agrirouter API. Updated on Apr 21, 2020.

# agrirouter developer tutorials

Overview of all developer video tutorials: <https://github.com/DKE-Data/agrirouter-api-developer-tutorial>

➤ 01 Introduction:

➤ 09 Requesting the endpoint list:

<https://github.com/DKE-Data/agrirouter-api-developer-tutorial/blob/master/09-request-endpointlist/index.adoc>

➤ 10 Send a file:

<https://github.com/DKE-Data/agrirouter-api-developer-tutorial/blob/master/10-send-file/index.adoc>

➤ 11 Receive a file:

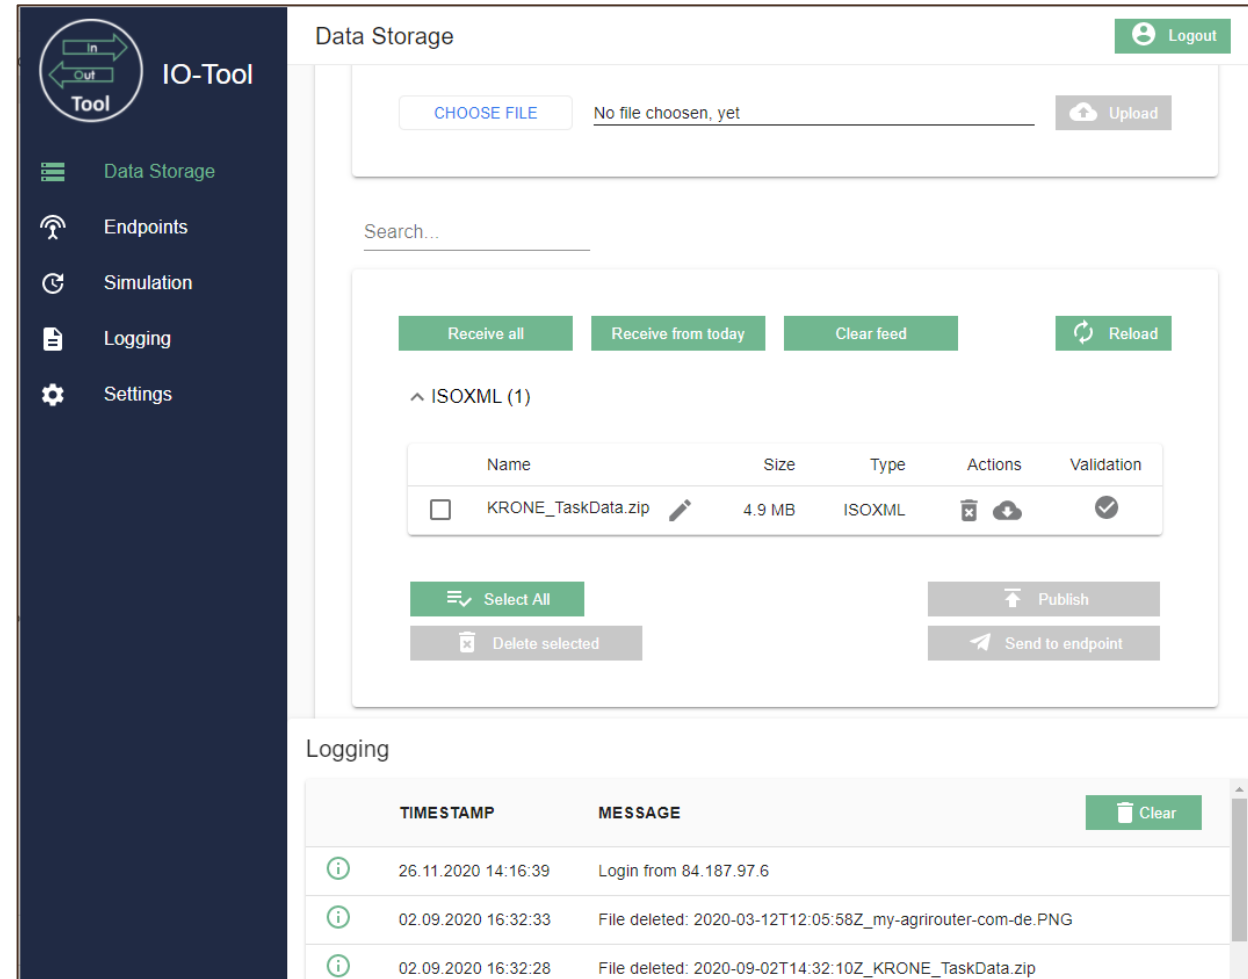

<https://github.com/DKE-Data/agrirouter-api-developer-tutorial/blob/master/11-receive-file/index.adoc>

# data transfer simulation via agrirouter during development

During development, it is possible to simulate data transfer via agrirouter by using the free of charge input - output Tool (IO-Tool).

<https://io.my-agrirouter.com/>

To get access, please send an email request to the support team ([support@my-agrirouter.com](mailto:support@my-agrirouter.com)).

The screenshot displays the IO-Tool web interface. On the left is a dark sidebar with navigation icons and labels: 'IO-Tool' (with a circular arrow icon), 'Data Storage', 'Endpoints', 'Simulation', 'Logging', and 'Settings'. The main content area is titled 'Data Storage' and includes a 'Logout' button in the top right. Below the title is a file selection area with a 'CHOOSE FILE' button, the text 'No file chosen, yet', and an 'Upload' button. A search bar is present below this. The main area contains several action buttons: 'Receive all', 'Receive from today', 'Clear feed', and 'Reload'. Below these is a section for 'ISOXML (1)' with a table listing files. The table has columns for Name, Size, Type, Actions, and Validation. One file is listed: 'KRONE\_TaskData.zip' (4.9 MB, ISOXML). Below the table are buttons for 'Select All', 'Delete selected', 'Publish', and 'Send to endpoint'. At the bottom of the interface is a 'Logging' section with a table showing timestamps and messages, and a 'Clear' button.

## agrirouter Quality Assurance environment

agrirouter **Quality Assurance** environment must be used if you are starting with agrirouter interface integration. This environment should be used also for testing your agrirouter implementation before certification.

➤ URL for the agrirouter Quality Assurance environment:

<https://agrirouter-qa.cfapps.eu10.hana.ondemand.com/>

✓ For a **Developer Account**, please use:

<https://agrirouter->

[qa.cfapps.eu10.hana.ondemand.com/um/register/developer](https://agrirouter-qa.cfapps.eu10.hana.ondemand.com/um/register/developer)

✓ For **Login**, please use:

<https://agrirouter-qa.cfapps.eu10.hana.ondemand.com/>

# agrirouter Quality Assurance environment

## ➤ Create agrirouter developer account in **Quality Assurance** environment:

Step 3.1 Please go to: <https://agrirouter-qa.cfapps.eu10.hana.ondemand.com/>

Step 3.1 Click on developer, you will be redirected: <https://agrirouter-qa.cfapps.eu10.hana.ondemand.com/um/register/developer>

Step 3.1 Register your company, with an email address specific to QA, like e.g., [ar-developer-qa@company.com](mailto:ar-developer-qa@company.com) as a developer

Step 3.1 After registration, please send an email request for approval to our support team ([support@my-agrirouter.com](mailto:support@my-agrirouter.com)).

Step 3.2 Login to the Quality Assurance environment, create your software version and submit your solution.

Step 3.3 Send an email request for approval to the support team ([support@my-agrirouter.com](mailto:support@my-agrirouter.com)).

Step 3.4 Please contact the certification company: <https://my-agrirouter.com/de/support/certification/> to learn what will be certified.

Certification information: <https://docs.my-agrirouter.com/agrirouter-interface-documentation/latest/certification.html>

Step 3.5 Now, you can start integrating the agrirouter interface into your solution.

Step 3.6 After successful integration, you can test your development and exchange data via agrirouter and IO-Tool as additional endpoint.

If you make capabilities changes, please create a new version. This version has to be reviewed and approved again.

# agrirouter Production environment

- URL for the agrirouter Production environment:

<https://goto.my-agrirouter.com/>

- ✓ For a **Developer Account**, please use:

<https://goto.my-agrirouter.com/um/register/developer>

- ✓ For **Login**, please use:

<https://goto.my-agrirouter.com/app>

# agrirouter Production environment

## ➤ Create agrirouter developer account in **Production** environment:

Step 4.1 Please go to: <https://goto.my-agrirouter.com/um/register/developer>

Step 4.1 Register your company with an email address specific to Production, like e.g., [ar-developer@company.com](mailto:ar-developer@company.com) as a developer.

Step 4.1 After registration, please send an email request for approval to our support team ([support@my-agrirouter.com](mailto:support@my-agrirouter.com)).

Step 4.1 Use developer account credentials for log in in Production environment: <https://goto.my-agrirouter.com>

Step 4.2 Register and submit your own software version.

Step 4.3 After successful certification, the certification company will create an agrirouter certification document.

Contact for the certification of Telemetry-Box = [agrirouter@isobus-test.com](mailto:agrirouter@isobus-test.com)

Contact for the certification of Farming-Software (App) and Telemetry-Platform = [agrirouter-certification@LMIS.de](mailto:agrirouter-certification@LMIS.de)

Step 4.4 Then your solution will be approved by our support team in production environment for the end user.

**Optional: Step 4.5** It is possible to set your solution in “approve for testing”, if only selected customers should use your solution.

If you make capability or command changes, please create a new version. This version has to be certified and approved again

# agrirouter service & support

# agrirouter service management - First Level Support

**End User**  
(Farmer or Contractor)

First Level Support

Responsible are:

**Machine Manufacturer**

**Dealer**

**Software Provider**

**Hardware Provider**

# agrirouter service management - Second Level Support

**Second Level Support**

**Responsible is:**

**Support availability**  
Monday - Friday,  
8 a.m.–6 p.m.

**4 Support People**

**Support Channel**

Log in

agrirouter Help Center

Find help and services

Welcome! You can raise an agrirouter Help Center request from the options provided.

What can we help you with?

 **report an agrirouter Incident**  
If you have an incident (bug, login problems etc.) with you running agrirouter software please use this form.

 **agrirouter general Request**  
If you have further question or need additional information regarding agrirouter integration and partnership or you have idea for a new feature please use this form.

The telephone numbers should under no circumstances be passed on to end customers. They are intended exclusively for Machine Manufacturers, Dealers and Partner

# agrirouter service management - System Status Page

- **agrirouter services:** <https://agrirouter.statuspage.io/>
- **User Interface Service:** Monitoring if the login in the user interface is possible.
- **Onboarding Service:** Monitoring if it is possible to create a registration code and onboard a device or software application to agrirouter.
- **Capability Message Service:** Monitoring if it is possible to send a capability message to agrirouter including a confirmation from agrirouter.
- **Content Message Service:** Monitoring if it is possible to send a content message to another endpoint and receiving the same message as a recipient.

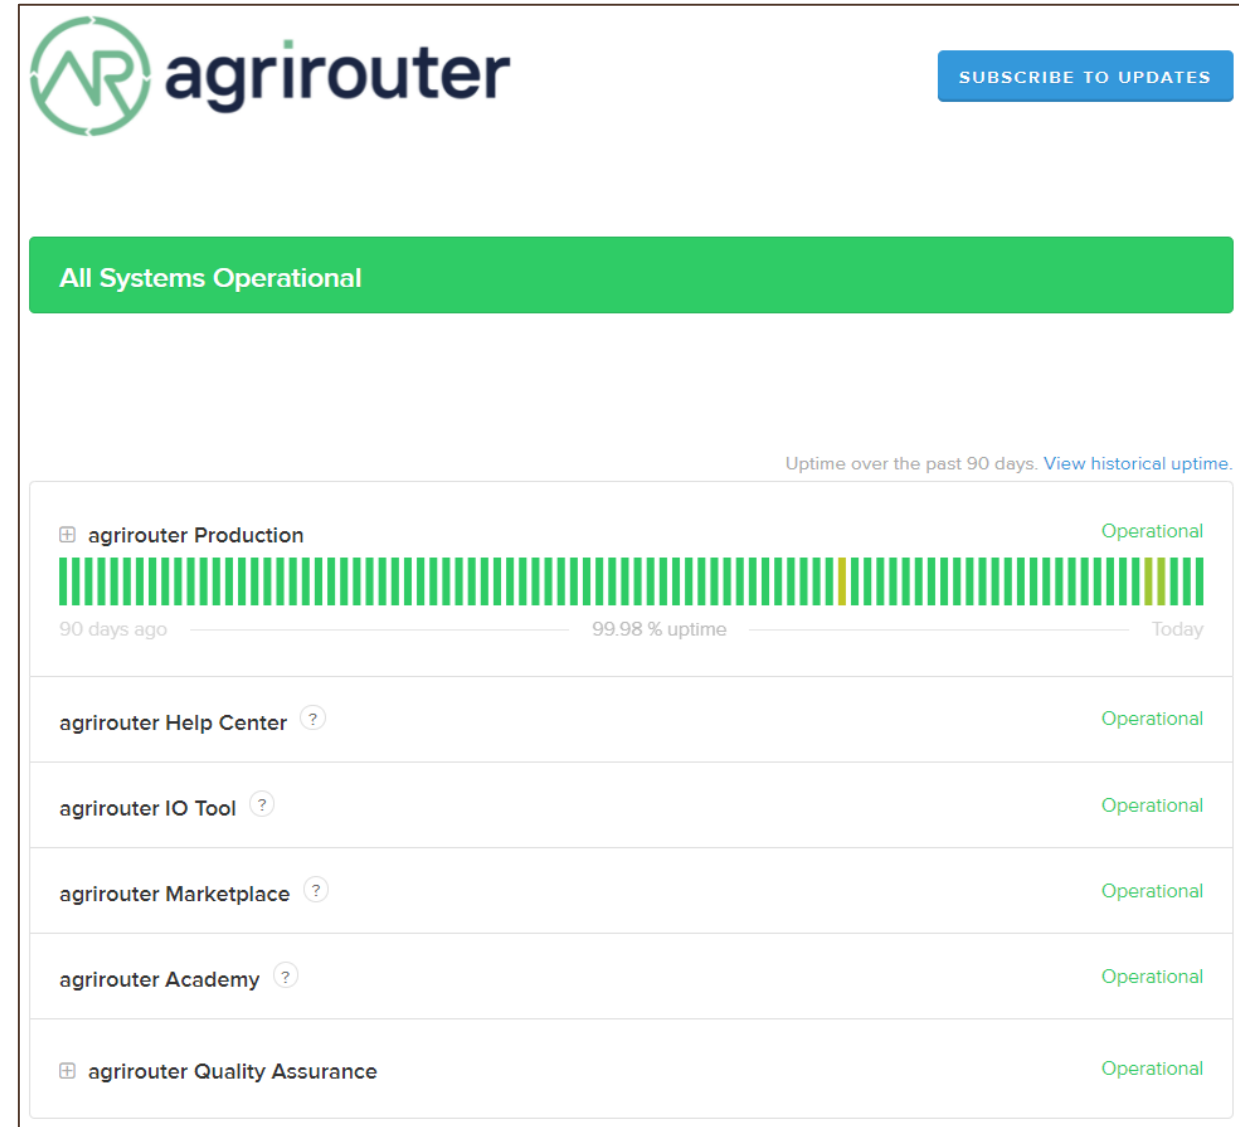

system status integration via [API](#) is possible

# agrirouter service management - System Status Page

## agrirouter status definition:

- **operational:** The components are working as expected and in a timely manner.
- **under maintenance:** The component is currently being worked on.
- **degraded performance:** The components are working but are slow or otherwise impacted in a minor way. The component response time is longer than expected.
- **partial outage:** The components are completely broken for a subset of customers but is working for the other.
- **major outage:** The components are completely unavailable.

## History view on agrirouter services status

- agrirouter service status during the last 90 days
- History information:
  - When was the service not available?
  - Which service was not available?
  - How long was the service not available?
  - Overall uptime of the agrirouter solution.

# agrirouter service management - System Events

## Technical newsletter with information about:

- agrirouter scheduled maintenance
  - Maintenance triggered by SAP data center
- New deployments of agrirouter
  - New releases and contents
  - Bugfix information for upcoming releases
- Change request information including impact
- Incident information
- etc.

Everybody can and should subscribe this notifications.

The screenshot shows the agrirouter system events page. At the top right, there is a blue button labeled 'SUBSCRIBE TO UPDATES' which is highlighted with a red box and a red arrow. Below the logo, a green bar indicates 'All Systems Operational'. A chart shows 'Uptime over the past 90 days' with a 99.98% uptime rate. Below the chart is a table of system components:

System Component	Status
agrirouter Production	Operational
agrirouter Help Center	Operational
agrirouter IO Tool	Operational
agrirouter Marketplace	Operational
agrirouter Academy	Operational
agrirouter Quality Assurance	Operational

A photograph of a cornfield with green stalks in the foreground and a blue sky with white clouds in the background. A semi-transparent dark blue horizontal band is overlaid across the middle of the image, containing white text.
